CEQA Initial Study - Environmental Checklist Form (Based on the State CEQA Guidelines, Appendix G Rev. March, 2010)

1. Title; Project Numbers; Environmental Log Number:

Sol Orchard Valley Center Solar Energy Major Use Permit; 3300-11-027 (MUP); 3910-11-08-010 (ER)

2. Lead agency name and address:

County of San Diego, Department of Planning and Land Use 5201 Ruffin Road, Suite B, San Diego, CA 92123-1666

- 3. a. Contact: Mark Slovick, Project Manager
 - b. Phone number: (858) 495-5172
 - c. E-mail: Mark.Slovick@sdcounty.ca.gov.
- 4. Project location:

The project site is located at 15155 Vesper Road in the Valley Center Community Plan area, within unincorporated San Diego County (APN 188-290-20-00).

Thomas Brothers Coordinates: Page 1090, Grid J/1

5. Project Applicant name and address:

Sol Orchard, LLC, P.O. Box 222416, Carmel, CA 93923

6. General Plan Designation

Community Plan: Valley Center

Land Use Designation: SR-4 (Semi-Rural Residential)

Density: 1 du/4, 8, 16 acres

7. Zoning

Use Regulation: A70 (Limited Agricultural)

Minimum Lot Size: 2 acres Special Area Regulation: N/A

8. Description of project:

The project is a Major Use Permit to allow for the construction and operation of a photovoltaic solar farm. The project would consist of solar panels over approximately 46.1 acres of the 54.6 acre site with a production capacity of 7.5 Megawatts (MW). The proposed panels would be single-axis tracking photovoltaic solar panels supported on a galvanized driven H-pile post system which would not exceed 12-feet in height at maximum tilt. The project site is located at 15155 Vesper Road in the Valley Center Community Plan area, within unincorporated San Diego County. The site is subject to the SR-4 (Semi-Rural Residential) General Plan Land Use Designation. Zoning for the site is A70 (Limited Agricultural). The site contains an existing single family residence that would be retained. Access would be provided by a driveway connecting to Vesper Road. The project includes the construction of a 10-foot wide pathway along Vesper Road and a 10-foot wide trail on-site along the western project boundary.

9. Surrounding land uses and setting:

Lands surrounding the project site are used for agriculture and single family residential uses. The topography of the project site and adjacent land is generally flat. The project site is bounded by Vesper Road to the north and Valley Center Road to the south.

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):

Permit Type/Action	<u>Agency</u>
Major Use Permit	County of San Diego
County Right-of-Way Permits	County of San Diego
Construction Permit	
Excavation Permit	
Encroachment Permit	
Improvement Plans	County of San Diego
General Construction Storm water	RWQCB
Permit	
Fire District Approval	Valley Center Fire Protection District

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED: The environmental factors checked below would be potentially affected by this project and involve at least one impact that is a "Potentially Significant Impact" or a "Less Than Significant With Mitigation Incorporated," as indicated by the checklist on the following pages.

Aesthetics	Agriculture and Forest	Air Quality
------------	------------------------	-------------

⊠ <u>Bio</u>	logical Resources	Cultural Resources		⊠Geology & Soils	
☐ Greenhouse Gas Emissions ☐ Land Use & Planning ☐ Population & Housing		☐ Hazards & Haz. Materials ☐ Mineral Resources ☐ Public Services		☐ Hydrology & Water Quality☐ Noise☐ Recreation	
⊠Tra	nsportation/Traffic	Utilities & Service	<u>Systems</u>	⊠Mandatory Findings of Significance	
DETE	ERMINATION: On the ba	asis of this initial evalu	uation:		
	On the basis of this Initi that the proposed pro environment, and a NEC	oject COULD NOT	have a	lanning and Land Use finds significant effect on the prepared.	
	On the basis of this Initial Study, the Department of Planning and Land Use finds that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.				
On the basis of this Initial Study, the Department of Planning and Land Use finds that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

INSTRUCTIONS ON EVALUATION OF ENVIRONMENTAL IMPACTS

- 1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, Less Than Significant With Mitigation Incorporated, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- 4. "Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
- 5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
 - a) Earlier Analysis Used. Identify and state where they are available for review.
 - b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are "Less Than Significant With Mitigation Incorporated," describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7. The explanation of each issue should identify:
 - a) The significance criteria or threshold, if any, used to evaluate each question; and
 - b) The mitigation measure identified, if any, to reduce the impact to less than significance

I. AESTHETICS Would the project:a) Have a substantial adverse effect on a scenic vista?				
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact	

A vista is a view from a particular location or composite views along a roadway or trail. Scenic vistas often refer to views of natural lands, but may also be compositions of natural and developed areas, or even entirely of developed and unnatural areas, such as a scenic vista of a rural town and surrounding agricultural lands. What is scenic to one person may not be scenic to another, so the assessment of what constitutes a scenic vista must consider the perceptions of a variety of viewer groups.

The items that can be seen within a vista are visual resources. Adverse impacts to individual visual resources or the addition of structures or developed areas may or may not adversely affect the vista. Determining the level of impact to a scenic vista requires analyzing the changes to the vista as a whole and also to individual visual resources.

Less Than Significant Impact: The proposed project is a Major Use Permit for a 7.5 MW solar energy facility. A Visual Resources Report for the proposed project, dated December 2011, was prepared by RBF Consulting. Based on the results of the visual resources analysis, the project has been determined to be compatible with the existing visual environment in terms of visual character and quality for the following reasons: The Project would not result in the introduction of features that would significantly detract from or contrast with the visual character of the Valley Center community by conflicting with visual elements or quality of an existing area. In addition, the Project would not result in the removal of or substantial adverse change of one or more features that contribute to the valued visual character or image of the Project area, including but not limited to designated landmarks, historic resources, trees, or rock outcroppings. Furthermore, the Project would not substantially obstruct, interrupt, or detract from a valued focal and/or panoramic vista from a public road, trails within an adopted County or State trail system, scenic vista or highway, or recreational area. The Project as designed would also not result in an inconsistency with any goals, standards, or policies related to visual resources as given in the County General Plan, Valley Center Community Plan, Valley Center Design Guidelines, or other applicable regulations and ordinances. Furthermore, the project site would be landscaped in accordance with an approved Landscape Plan to further screen the site from Vesper Road, Valley Center and proposed trail and pathway. Valley Center Road is classified as a scenic route within the County General Plan; however, the project would be landscaped along Valley Center Road, which would screen the proposed project from the scenic route. Therefore, the project would not result in a significant visual impact to a designated County Scenic Route (Valley Center Road) in the General Plan.

The project will not result in cumulative impacts on a scenic vista because the proposed project viewshed and past, present and future projects within that viewshed were evaluated to determine their cumulative effects. Refer to XVIII. Mandatory Findings of

Significance for a comprehensive list of the projects considered. Those projects listed in Section XVII are located within the scenic vista's viewshed and will not contribute to a cumulative impact because: The proposed Project would not substantially obstruct or detract from valued lookouts or panoramic views from public roads, scenic highways, or recreational areas. Buildout of the cumulative projects would not have an adverse effect on these public viewsheds because the projects would match the existing development pattern in the valley. Furthermore, the project site would be landscaped in accordance with an approved Landscape Plan to further screen the site from Vesper Road, Valley Center Road and the proposed trail and pathway. Therefore, the project will not result in adverse project or cumulative impacts on a scenic vista.

b)	Substantially damage scenic resources, outcroppings, and historic buildings with	<i>'</i>
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

State scenic highways refer to those highways that are officially designated by the California Department of Transportation (Caltrans) as scenic (Caltrans - California Scenic Highway Program). Generally, the area defined within a State scenic highway is the land adjacent to and visible from the vehicular right-of-way. The dimension of a scenic highway is usually identified using a motorist's line of vision, but a reasonable boundary is selected when the view extends to the distant horizon. The scenic highway corridor extends to the visual limits of the landscape abutting the scenic highway.

Less Than Significant Impact:

The proposed project is Major Use Permit for a 7.5 MW solar energy facility. The project is compatible with the existing visual environment's in terms of visual character and quality for the following reasons: The Project would not result in the introduction of features that would significantly detract from or contrast with the visual character of the surrounding community by conflicting with visual elements or quality of an existing area (i.e., through conflicting style, size, coverage, scale, building materials, etc.). The Project would not result in the removal of or substantial adverse change to one or more features that contribute to the valued visual character or image of the Project area, including but not limited to designated landmarks, historic resources, trees, or rock outcroppings. Furthermore, the Project would not substantially obstruct, interrupt, or detract from a valued focal and/or panoramic vista from a public road, trails within an adopted County or State trail system, scenic vista or highway, or recreational area. The Project as designed would also not result in an inconsistency with any goals, standards, or policies related to visual resources as given in the County General Plan, Valley Center Community Plan, Valley Center Design Guidelines, or County Zoning Ordinance. Furthermore, the project site would be landscaped in accordance with an approved Landscape Plan to further screen the site from Vesper Road, Valley Center and proposed trail and pathway.

The project will not result in cumulative impacts on a scenic vista because the proposed project viewshed and past, present and future projects within that viewshed were evaluated to determine their cumulative effects. Refer to XVIII. Mandatory Findings of Significance for a comprehensive list of the projects considered. Those projects listed in Section XVII are located within the scenic vista's viewshed and will not contribute to a cumulative impact because: The proposed Project would not substantially obstruct or detract from valued lookouts or panoramic views from public roads, scenic highways, or recreational areas. Buildout of the cumulative projects would not have an adverse effect on these public viewsheds because the projects would match the existing development pattern in the valley. Furthermore, the project site would be landscaped in accordance with an approved Landscape Plan to further screen the site from Vesper Road, Valley Center Road and the proposed trail and pathway. Therefore, the project will not result in any adverse project or cumulative level effect on a scenic resource within a State scenic highway.

c)	Substantially degrade the existing visu surroundings?	al cha	aracter or quality of the site and its
	Potentially Significant Impact		Less than Significant Impact
	Less Than Significant With Mitigation Incorporated		No Impact

Less Than Significant Impact:

Visual character is the objective composition of the visible landscape within a viewshed. Visual character is based on the organization of the pattern elements line, form, color, and texture. Visual character is commonly discussed in terms of dominance, scale, diversity and continuity. Visual quality is the viewer's perception of the visual environment and varies based on exposure, sensitivity and expectation of the viewers. The existing visual character and quality of the project site and surrounding can be characterized as agricultural with rural residential use types.

The proposed project is a Major Use Permit for a 7.5 MW solar energy facility. The project is compatible with the existing visual environment's visual character and quality for the following reasons: The Project would not result in the introduction of features that would significantly detract from or contrast with the visual character of the Valley Center community by conflicting with visual elements or quality of an existing area. In addition, the Project would not result in the removal of or substantial adverse change of one or more features that contribute to the valued visual character or image of the Project area, including but not limited to designated landmarks, historic resources, trees, or rock outcroppings. Furthermore, the Project would not substantially obstruct, interrupt, or detract from a valued focal and/or panoramic vista from a public road, trails within an adopted County or State trail system, scenic vista or highway, or recreational area. The Project as designed would also not result in an inconsistency with any goals, standards, or policies related to visual resources as given in the County General Plan, Valley Center Community Plan, Valley Center Design Guidelines, or other applicable regulations and ordinances. Furthermore, the project site would be landscaped in

accordance with an approved Landscape Plan to further screen the site from Vesper Road, Valley Center and proposed trail and pathway.

- 8 -

The project will not result in cumulative impacts on visual character or quality because the entire existing viewshed and a list of past, present and future projects within that viewshed were evaluated. Refer to XVIII. Mandatory Findings of Significance for a comprehensive list of the projects considered. Those projects listed in Section XVII are located within the viewshed surrounding the project and will not contribute to a cumulative impact for the following reasons: The proposed Project would not substantially obstruct or detract from valued lookouts or panoramic views from public roads, scenic highways, or recreational areas. Buildout of the cumulative projects would not have an adverse effect on these public viewsheds because the projects would match the existing development pattern in the valley. Furthermore, the project site would be landscaped in accordance with an approved Landscape Plan to further screen the site from Vesper Road, Valley Center Road and the proposed trail and pathway. Therefore, the project will not result in any adverse project or cumulative level effect on a scenic resource within a State scenic highway. Therefore, the project will not result in any adverse project or cumulative level effect on visual character or quality on-site or in the surrounding area.

d)	Create a new source of substantial light day or nighttime views in the area?	ht or	glare,	which would adversely	y affect
	Potentially Significant Impact		Less	than Significant Impac	t
	Less Than Significant With Mitigation Incorporated		No I	mpact	

Less Than Significant Impact:

The proposed project will use outdoor lighting and is located within Zone A as identified by the San Diego County Light Pollution Code. However, it will not adversely affect nighttime views or astronomical observations, because the project will conform to the Light Pollution Code (Section 59.101-59.115), including the Zone A lamp type and shielding requirements per fixture and hours of operation limitations for outdoor lighting and searchlights.

In addition, the proposed project will control outdoor lighting and sources of glare in the following ways:

- 1. The project will not install outdoor lighting that directly illuminates neighboring properties.
- 2. The project will not install outdoor lighting that would cast a direct beam angle towards a potential observer, such as a motorists, cyclist or pedestrian.
- 3. The project will not install outdoor lighting for vertical surfaces such as buildings, landscaping, or signs in a manner that would result in useful light or spill light being cast beyond the boundaries of intended area to be lit.
- 4. The project would install solar panels with an anti-reflective coating to ensure that the surfaces are not highly reflective or a high-gloss surface color that would be

visible along roadways, pedestrian walkways, or in the line of sight of adjacent properties. Furthermore, the project site would be landscaped in accordance with an approved Landscape Plan to further screen the site from Vesper Road, Valley Center and proposed trail and pathway.

The project will not contribute to significant cumulative impacts on day or nighttime views because the project will conform to the Light Pollution Code. The Code was developed by the San Diego County Department of Planning and Land Use and Department of Public Works in cooperation with lighting engineers, astronomers, land use planners from San Diego Gas and Electric, Palomar and Mount Laguna observatories, and local community planning and sponsor groups to effectively address and minimize the impact of new sources light pollution on nighttime views. The standards in the Code are the result of this collaborative effort and establish an acceptable level for new lighting. Compliance with the Code is required prior to issuance of any building permit for any project. Mandatory compliance for all new building permits ensures that this project in combination with all past, present and future projects will not contribute to a cumulatively considerable impact. Therefore, compliance with the Code ensures that the project will not create a significant new source of substantial light or glare, which would adversely affect daytime or nighttime views in the area, on a project or cumulative level.

In addition, the project's outdoor lighting is controlled through the Major Use Permit, which further limits outdoor lighting through strict controls. Therefore, compliance with the Code, in combination with the outdoor lighting and glare controls listed above ensures that the project will not create a significant new source of substantial light or glare.

II. AGRICULTURE AND FORESTRY RESOURCES -- Would the project:

a)	Convert Prime Farmland, Unique Farm Importance (Important Farmland), as s the Farmland Mapping and Monitorin Agency, or other agricultural resources,	hown g Pro	on the maps prepared pursuant to gram of the California Resources
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant With Mitigation Incorporated: The project site has land designated as Prime Farmland according to the State Farmland Mapping and Monitoring Program (FMMP) and due to the presence of onsite agricultural resources, the County agricultural resources specialist evaluated the site to determine the importance of the resource based on the County's Local Agricultural Resources Assessment (LARA) model which takes into account local factors that define the importance of San Diego County agricultural resources. The LARA model considers the availability of water resources, climate, soil quality, surrounding land use, topography, and land use or parcel size consistency between the project site and surrounding land

uses. A more detailed discussion of the LARA model can be found in the Guidelines for Determining Significance for Agricultural Resources at http://www.sdcdplu.org/dplu/Resource/docs/3~pdf/AG-Guidelines.pdf.

In order for a site to be considered an important agricultural resource based on the LARA model, all three required LARA model factors (water, soil, and climate) must receive either a high or moderate score. A low score in any of these three categories would render a LARA model result that the site is not an important agricultural resource. Based on the Prime Farmland Soils, Climate and availability of water, the site is considered an important agricultural resource.

As a result, the project is required to mitigate the impacts to the Prime Farmland soils. The project as designed would directly impact a total of 6.61 acres of soils on the project site. Mitigation for the impacts to agricultural resources will be required in the form of a payment to the County's Purchase of Agricultural Conservation Easement (PACE) Program – **OR** – off-site preservation at a ratio of 1:1 for all impacted agricultural soils for a total of 6.61 acres – **OR** – on-site preservation of 6.61 agricultural mitigation. Therefore, the impact to agricultural resources would be less than significant with mitigation incorporated.

b)	C	Conflict with existing zoning for agricultu	ıral us	e, or a Williamson Act contract?
		Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
The agriculture ag	e pro riculto agricon is: agricon agricon	han Significant Impact bject site is zoned A70 (Limited Agri ural zone. However, the proposed proj cultural use, because solar energy fa- suance of a Major use Permit and will cultural use. Additionally, the project so t. Therefore, there will be no conflict we mson Act contract.	ect wil cilities not ci site's l	I not to result in a conflict in zoning are a permitted use in A70 zone eate a conflict with existing zoning and is not under a Williamson Act
c)	Pub Res	flict with existing zoning for, or cause lic Resources Code section 12220(g ources Code section 4526), or timbe ned by Government Code section 5110)), or rland	timberland (as defined by Public
		Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

No Impact: The project site including offsite improvements do not contain forest lands or timberland. The County of San Diego does not have any existing Timberland Production Zones. In addition, the project is consistent with existing zoning and a

rezone of the property is not proposed. Therefore, project implementation would not conflict with existing zoning for, or cause rezoning of, forest land, timberland or timberland production zones.

d) Result in the loss of forest land, conversion of forest land to non-forest use, or involve other changes in the existing environment, which, due to their location or nature, could result in conversion of forest land to non-forest use?				
 □ Potentially Significant Impact □ Less than Significant Impact □ Less Than Significant With Mitigation Incorporated □ No Impact 				
No Impact: The project site including any offsite improvements do not contain any forest lands as defined in Public Resources Code section 12220(g), therefore project implementation would not result in the loss or conversion of forest land to a non-forest use. In addition, the project is not located in the vicinity of offsite forest resources.				
e) Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Important Farmland or other agricultural resources, to non-agricultural use?				
 □ Potentially Significant Impact □ Less than Significant Impact □ Less than Significant Impact □ No Impact 				
Less Than Significant With Mitigation Incorporated: The project site and surrounding area has land designated as Prime Farmland. However, mitigation for the impacts to agricultural resources will be required in the form of a payment to the County's Purchase of Agricultural Conservation Easement (PACE) Program – OR – off-site preservation at a ratio of 1:1 for all impacted agricultural soils for a total of 6.61 acres – OR – on-site preservation of 6.61 agricultural mitigation. Therefore, no potentially significant project or cumulative level conversion of Prime Farmland, Unique Farmland, Farmland of Statewide Importance or Farmland of Local Importance to a non-agricultural use will occur as a result of this project with the mitigation incorporated.				
III. AIR QUALITY Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the San Diego Regional Air Quality Strategy (RAQS) or applicable portions of the State Implementation Plan (SIP)?				
 □ Potentially Significant Impact □ Less Than Significant With Mitigation Incorporated □ No Impact 				

Less Than Significant Impact:

The project proposes development that was anticipated in SANDAG growth projections used in development of the RAQS and SIP. Operation of the project will result in emissions of ozone precursors that were considered as a part of the RAQS based on growth projections. As such, the proposed project is not expected to conflict with either the RAQS or the SIP. In addition, the operational emissions from the project are below the screening levels, and subsequently will not violate ambient air quality standards.

b)	Violate any air quality standard or c projected air quality violation?	ontribu	ute substantially to an existing c
	Potentially Significant Impact		Less than Significant Impact
\geq	Less Than Significant With Mitigation Incorporated		No Impact

In general, air quality impacts from land use projects are the result of emissions from motor vehicles, and from short-term construction activities associated with such projects. The San Diego County Land Use Environment Group (LUEG) has established guidelines for determining significance which incorporate the Air Pollution Control District's (SDAPCD) established screening-level criteria for all new source review (NSR) in APCD Rule 20.2. These screening-level criteria can be used as numeric methods to demonstrate that a project's total emissions (e.g. stationary and fugitive emissions, as well as emissions from mobile sources) would not result in a significant impact to air quality. Since APCD does not have screening-level criteria for emissions of volatile organic compounds (VOCs), the use of the screening level for reactive organic compounds (ROC) from the South Coast Air Quality Management District (SCAQMD) for the Coachella Valley (which are more appropriate for the San Diego Air Basin) are used.

Less Than Significant Impact with Mitigation Incorporated: The applicant proposes a Major Use Permit for a 7.5 MW solar energy facility. Based on the Air Quality Analysis dated October 20, 2011, prepared by LDN Consulting, the entire Project site would be grubbed, graded and compacted in approximately one month. trenching would be completed in approximately one month and total construction of the proposed project would be completed in approximately 6 months from start to finish. Additionally, this includes the construction of all onsite access roads which would be part of the onsite grading operation. The analysis concluded that PM¹⁰ emissions would exceed the SDAPCD air quality standard of 100 lbs/day and would require mitigation to comply. Mitigation includes the application of a permeable soil-binding agent suitable for both traffic and non-traffic area. The agents shall be biodegradable, eco-safe, with liquid copolymers that stabilize and solidify soils or aggregates, which facilitate dust suppression. Alternatively, a permeable rock material consisting of either river stone decomposed granite or gravel could be placed in a thin cover over all exposed surface area in-lieu of the binding agent referenced above.

In-lieu of, or in combination with the permeable agent or rock material, the areas located between the arrays, and any non-drivable surface may be revegetated with native noninvasive plant species. A Revegetation Plan shall be prepared that provides sufficient ground cover to mitigate fugitive dust from the ground disturbances. The

revegetation plan shall conform to the most current version of the County of San Diego Report Format and Content Requirements for Revegetation Plans.

In-lieu of, or in combination with the conditions mentioned above, the areas located between the arrays, and any non-drivable surface may be used for agriculture, including but not limited to pasture land to be grazed by cattle, sheep or goats, vegetable crops, ornamentals, berries, grapes, or container ornamentals. Therefore, the project would not result in a violation of an air quality standard or contribute substantially to an existing or projected air quality violation with mitigation incorporated. Cumulative impacts are not expected given the fact that the proposed project is expected to reduce ozone precursors given it is a renewable non combustive energy project.

 □ Potentially Significant Impact □ Less Than Significant With Mitigation Incorporated □ No Impact 	c) Result in a cumulatively considerable which the project region is non-attainn ambient air quality standard (included quantitative thresholds for ozone precur	nent u	under an applicable federal or state eleasing emissions which exceed
	Less Than Significant With Mitigation		

San Diego County is presently in non-attainment for the 1-hour concentrations under the California Ambient Air Quality Standard (CAAQS) for Ozone (O₃). San Diego County is also presently in non-attainment for the annual geometric mean and for the 24-hour concentrations of Particulate Matter less than or equal to 10 microns (PM₁₀) under the CAAQS. O₃ is formed when volatile organic compounds (VOCs) and nitrogen oxides (NO_x) react in the presence of sunlight. VOC sources include any source that burns fuels (e.g., gasoline, natural gas, wood, oil); solvents; petroleum processing and storage; and pesticides. Sources of PM₁₀ in both urban and rural areas include: motor vehicles, wood burning stoves and fireplaces, dust from construction, landfills, agriculture, wildfires, brush/waste burning, and industrial sources of windblown dust from open lands.

Less Than Significant Impact: Air quality emissions associated with the project include emissions of PM_{10} , NO_x and VOCs from construction/grading activities, as well as VOCs as the result of increase of traffic from operations at the facility. However, grading operations associated with the construction of the project would be subject to County of San Diego Grading Ordinance, which requires the implementation of dust control measures. Emissions from the construction phase would be minimal and localized, resulting in PM_{10} and VOC emissions below the screening-level criteria established by the LUEG guidelines for determining significance. The vehicle trips generated from the project will result in 2 Average Daily Trips (ADTs). According to the Bay Area Air Quality Management District CEQA Guidelines for Assessing the Air Quality Impacts of Projects and Plans, projects that generate less than 2,000 ADT are below the screening-level criteria established by the LUEG guidelines for determining significance for VOCs and PM_{10} .

In addition, a list of past, present and future projects within the surrounding area were evaluated and none of these projects emit significant amounts of criteria pollutants. Refer to XVIII. Mandatory Findings of Significance for a comprehensive list of the projects considered. The proposed project as well as the past, present and future projects within the surrounding area, have emissions below the screening-level criteria established by the LUEG guidelines for determining significance for VOCs and PM_{10} , therefore, the construction and operational emissions associated with the proposed project are not expected to create a cumulatively considerable impact nor a considerable net increase of PM_{10} , or any O_3 precursors.

d)	Expose sensitive receptors to substantia	al pollu	tant concentrations?
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

IV. BI	OLOGICAL RESOURCES Would the Have a substantial adverse effect, eithe on any species identified as a candidate local or regional plans, policies, or regul Fish and Game or U.S. Fish and Wildlife	r direc te, ser ations	tly or through habitat modifications nsitive, or special status species in , or by the California Department o
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less than Significant with Mitigation Incorporated: Based on an analysis of the County's Geographic Information System (GIS) records, the County's Comprehensive Matrix of Sensitive Species, site photos and a Biological Resources Report dated August 4, 2011 prepared by Atkins, it has been determined that the site is completely developed in agricultural uses including row crops and orchards as well as an existing single family residence. While the proposed project will not result in any direct habitat impacts, there are two individual oak trees just offsite of the proposed project site. Due to the existence of the oak root zones of these trees on the proposed project site, the project will be conditioned to include a biological monitor during all land disturbing activities to ensure that there are no adverse impacts to the oak root zones. With the implementation of this mitigation measure, there will be a less than significant impact on biological resources.

V. CULTURAL RESOURCES -- Would the project:

a) Cause a substantial adverse change in the significance of a historical resource as defined in 15064.5?

Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
 	_	

No Impact: Based on an analysis of records and a survey of the property by a field crew from ASM Affiliates, Inc under the direction of County of San Diego approved archaeologist Jerry Schaefer on June 1, 2011, it has been determined that there are no impacts to historical resources because they do not occur within the project site. The results of the survey are provided in a cultural resources letter report titled, "Cultural Resources Inventory for the Sol Orchard Project, Valley Center, San Diego County, California", dated September 2011, prepared by Micah Hale, approved by Jerry Schaefer of ASM Affiliates, Inc.

,	Cause a substantial adverse change resource pursuant to 15064.5?	in the	significance of an archaeologic
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

No Impact: Based on an analysis of records and a survey of the property by a field crew from ASM Affiliates, Inc under the direction of County of San Diego approved archaeologist Jerry Schaefer on June1, 2011, it has been determined that the project site does not contain any archaeological resources. The results of the survey are provided in an archaeological survey report titled, "Cultural Resources Inventory for the Sol Orchard Project, Valley Center, San Diego County, California", dated September 2011, prepared by Micah Hale, approved by Jerry Schaefer of ASM Affiliates, Inc. Because the project area is relatively flat and disturbed from agricultural uses, and grading will be minimal, no grading monitoring will be required. However, the project must comply with the San Diego County Grading, Clearing, and Watercourse Ordinance (§87.101-87.804), CEQA §15064.5(d), and §7050.5 of the Health & Safety Code. Section 87.429 of the Grading, Clearance, and Watercourse Ordinance requires the suspension of grading operations when human remains or Native American artifacts are encountered.

c)	Ι	Directly or indirectly destroy a unique ge	eologic	c feature?
		Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

San Diego County has a variety of geologic environments and geologic processes which generally occur in other parts of the state, country, and the world. However, some features stand out as being unique in one way or another within the boundaries of the County.

No Impact: The site does not contain any unique geologic features that have been listed in the County's Guidelines for Determining Significance for Unique Geology Resources nor does the site support any known geologic characteristics that have the potential to support unique geologic features.

d) Directly or indirectly destroy a unique paleontological resource or site?
 □ Potentially Significant Impact □ Less Than Significant With Mitigation Incorporated □ No Impact
No Impact: The project does not propose any grading and therefore will not directly or indirectly destroy a unique paleontological resource or site.
e) Disturb any human remains, including those interred outside of formal cemeteries?
☐ Potentially Significant Impact ☐ Less than Significant Impact ☐ Less Than Significant With Mitigation ☐ No Impact
No Impact: Based on an analysis of records and a survey of the property by a field crew from ASM Affiliates, Inc under the direction of County of San Diego approved archaeologist Jerry Schaefer on June1, 2011, it has been determined that the project will not disturb any human remains because the project site does not include a formal cemetery or any archaeological resources that might contain interred human remains. The results of the survey are provided in an archaeological survey report titled, "Cultural Resources Inventory for the Sol Orchard Project, Valley Center, San Diego County, California", dated September 26, 2011, prepared by Micah Hale, approved by Jerry Schaefer of ASM Affiliates, Inc. In addition, the project must comply with the San Diego County Grading, Clearing, and Watercourse Ordinance (§87.101-87.804), CEQA §15064.5(d), and §7050.5 of the Health & Safety Code. Section 87.429 of the Grading, Clearance, and Watercourse Ordinance requires the suspension of grading operations when human remains or Native American artifacts are encountered.
 VI. GEOLOGY AND SOILS Would the project: a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.
☐ Potentially Significant Impact ☐ Less than Significant Impact ☐ Less Than Significant With Mitigation ☐ No Impact

No Impact: The project is not located in a fault rupture hazard zone identified by the Alquist-Priolo Earthquake Fault Zoning Act, Special Publication 42, Revised 1997, Fault-Rupture Hazards Zones in California, or located within any other area with substantial evidence of a known fault. Therefore, there will be no impact from the exposure of people or structures to adverse effects from a known fault-rupture hazard zone as a result of this project.

' '		
ii. Strong seismic ground shaking?		
Potentially Significant ImpactLess Than Significant With MitigationIncorporated		Less than Significant Impact No Impact
Less Than Significant Impact: To ensure structures, the project must conform to the Se California Building Code. The County Code proposed foundation recommendations to be a permit. Therefore, compliance with the California ensures the project will not result in a potential people or structures to potential adverse effective.	eismic le requi approvornia B ally sigi	Requirements as outlined within the res a soils compaction report with ed before the issuance of a building uilding Code and the County Code nificant impact from the exposure of
iii. Seismic-related ground failure, in	ncludin	g liquefaction?
☐ Potentially Significant Impact☐ Less Than Significant With MitigationIncorporated		Less than Significant Impact No Impact
Less Than Significant With Mitigation Incomplete Within a "Potential Liquefaction Area" as Determining Significance for Geologic Hazard can mitigate the liquefaction hazard (includin Prior to issuance of building permits, a geapproved which specifies foundation design substantial damage to the proposed structure engineering design, impacts due to liquefaction	identifi ds. Nical study shall be reviewed and would be adequate to preclude to liquefaction. With a site-specific
iv. Landslides?		
Potentially Significant Impact	\boxtimes	Less than Significant Impact
Less Than Significant With Mitigation Incorporated		No Impact

Less Than Significant Impact: The project site is not within a "Landslide Susceptibility Area" as identified in the County Guidelines for Determining Significance for Geologic Hazards. Landslide Susceptibility Areas were developed based on landslide risk

profiles included in the *Multi-Jurisdictional Hazard Mitigation Plan, San Diego, CA* (URS, 2004). Landslide risk areas from this plan were based on data including steep slopes (greater than 25%); soil series data (SANDAG based on USGS 1970s series); soil-slip susceptibility from USGS; and Landslide Hazard Zone Maps (limited to western portion of the County) developed by the California Department of Conservation, Division of Mines and Geology (DMG). Also included within Landslide Susceptibility Areas are gabbroic soils on slopes steeper than 15% in grade because these soils are slide prone. Since the project is not located within an identified Landslide Susceptibility Area and the geologic environment has a low probability to become unstable, the project would have a less than significant impact from the exposure of people or structures to potential adverse effects from landslides.

b)	F	Result in substantial soil erosion or the loss of topsoil?		
	_	Potentially Significant Impact		Less than Significant Impact
[Less Than Significant With Mitigation Incorporated		No Impact

Less Than Significant Impact: According to the Soil Survey of San Diego County, the soils on-site are identified as Visalia sandy loam, Clayey alluvial land and Placentia sandy loam which have a soil erodibility rating of "moderate" and "severe" as indicated by the Soil Survey for the San Diego Area, prepared by the US Department of Agriculture, Soil Conservation and Forest Service dated December 1973. However, the project will not result in substantial soil erosion or the loss of topsoil for the following reasons:

- The project will not result in unprotected erodible soils; will not alter existing drainage patterns; is not located in a floodplain, wetland, or significant drainage feature; and will not develop steep slopes.
- The project has prepared a Storm Water Management Plan that includes the Best Management Practices to ensure sediment does not erode from the project site.
- The project involves grading. However, the project is required to comply with the San Diego County Code of Regulations, Title 8, Zoning and Land Use Regulations, Division 7, Sections 87.414 (DRAINAGE - EROSION PREVENTION) and 87.417 (PLANTING). Compliance with these regulations minimizes the potential for water and wind erosion.

Due to these factors, it has been found that the project will not result in substantial soil erosion or the loss of topsoil on a project level.

In addition, the project will not contribute to a cumulatively considerable impact because all the of past, present and future projects included on the list of projects that involve grading or land disturbance are required to follow the requirements of the San Diego County Code of Regulations, Title 8, Zoning and Land Use Regulations, Division 7, Sections 87.414 (DRAINAGE - EROSION PREVENTION) and 87.417 (PLANTING); Order 2001-01 (NPDES No. CAS 0108758), adopted by the San Diego Region RWQCB

on February 21, 2001; County Watershed Protection, Storm Water Management, and Discharge Control Ordinance (WPO) (Ord. No. 9424); and County Storm water Standards Manual adopted on February 20, 2002, and amended January 10, 2003 (Ordinance No. 9426). Refer to XVIII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

e)	Have soils incapable of adequately alternative wastewater disposal system disposal of wastewater?		•
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

No Impact: The project is for an unmanned photovoltaic solar farm. The project does not propose any septic tanks or alternative wastewater disposal systems since no wastewater will be generated.

VII. GREENHOUSE GAS EMISSIONS - Would the project

,	Generate greenhouse gas emissions, e significant impact on the environment?	ither	directly or indirectly, that may have a
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant Impact: Greenhouse Gas (GHG) Emissions are said to result in an increase in the earth's average surface temperature commonly referred to as global warming. This rise in global temperature is associated with long-term changes in precipitation, temperature, wind patterns, and other elements of the earth's climate system, known as climate change. These changes are now broadly attributed to GHG emissions, particularly those emissions that result from the human production and use of fossil fuels.

GHGs include carbon dioxide, methane, halocarbons (HFCs), and nitrous oxide, among others. Human induced GHG emissions are a result of energy production and consumption, and personal vehicle use, among other sources. A regional GHG inventory prepared for the San Diego Region¹ identified on-road transportation (cars and trucks) as the largest contributor of GHG emissions in the region, accounting for 46% of the total regional emissions. Electricity and natural gas combustion were the second (25%) and third (9%) largest regional contributors, respectively, to regional GHG emissions.

Climate changes resulting from GHG emissions could produce an array of adverse environmental impacts including water supply shortages, severe drought, increased flooding, sea level rise, air pollution from increased formation of ground level ozone and particulate matter, ecosystem changes, increased wildfire risk, agricultural impacts, ocean and terrestrial species impacts, among other adverse effects.

In 2006, the State passed the Global Warming Solutions Act of 2006, commonly referred to as AB 32, which set the greenhouse gas emissions reduction goal for the State of California into law. The law requires that by 2020, State emissions must be reduced to 1990 levels by reducing greenhouse gas emissions from significant sources via regulation, market mechanisms, and other actions.

According to the San Diego County Greenhouse Gas Inventory (2008), the region must reduce its GHG emissions by 33 percent from "business-as-usual" emissions to achieve

¹ San Diego County Greenhouse Gas Inventory: An Analysis of Regional Emissions and Strategies to Achieve AB 32 Targets. University of San Diego and the Energy Policy Initiatives Center (EPIC), September 2008.

1990 emissions levels by the year 2020. "Business-as-usual" refers to the 2020 emissions that would have occurred in the absence of the mandated reductions.

Senate Bill 375 (SB 375), passed in 2008, links transportation and land use planning with global warming. It requires the California Air Resources Board (ARB) to set regional targets for the purpose of reducing greenhouse gas emissions from passenger vehicles. Under this law, if regions develop integrated land use, housing and transportation plans that meet SB 375 targets, new projects in these regions can be relieved of certain review requirements under CEQA. Development of regional targets is underway and SANDAG is in the process of preparing the region's Sustainable Communities Strategy (SCS) which will be a new element of the 2050 Regional Transportation Plan (RTP). The strategy will identify how regional greenhouse gas reduction targets, as established by the ARB, will be achieved through development patterns, transportation infrastructure investments, and/or transportation measures or policies that are determined to be feasible.

In addressing the potential for a project to generate GHG emissions that would have a potentially significant cumulative effect on the environment, a 900 metric ton threshold was selected to identify those projects that would be required to calculate emissions and implement mitigation measures to reduce a potentially significant impact. The 900 metric ton screening threshold is based on a threshold included in the CAPCOA white paper² that covers methods for addressing greenhouse gas emissions under CEQA. The CAPCOA white paper references the 900 metric ton guideline as a conservative threshold for requiring further analysis and mitigation. The 900 metric ton threshold was based on a review of data from four diverse cities (Los Angeles in southern California and Pleasanton, Dublin, and Livermore in northern California) to identify the threshold that would capture at least 90% of the residential units or office space on the pending applications list. This threshold will require a substantial portion of future development to minimize GHG emissions to ensure implementation of AB 32 targets is not impeded. By ensuring that projects that generate more than 900 metric tons of GHG implement mitigation measures to reduce emissions, it is expected that a majority of future development will contribute to emission reduction goals that will assist the region in meeting its GHG reduction targets.

It should be noted that an individual project's GHG emissions will generally not result in direct impacts under CEQA, as the climate change issue is global in nature, however an individual project could be found to contribute to a potentially significant cumulative impact. CEQA Guidelines Section 15130(f) states that an EIR shall analyze greenhouse gas emissions resulting from a proposed project when the incremental contribution of those emissions may be cumulatively considerable.

The project is an unmanned photovoltaic solar farm and is expected to generate less than 900 metric tons of GHG emissions based on estimates of GHG emissions for

² See CAPCOA White Paper: "CEQA &Climate Change: Evaluating and Addressing Greenhouse Gas Emissions from Projects Subject to the California Environmental Quality Act" January 2008 (http://www.capcoa.org/rokdownloads/CEQA/CAPCOA%20White%20Paper.pdf).

various project types included in the CAPCOA white paper³. The project's GHG emissions are found to have a less than cumulatively considerable contribution to GHG emissions because the project will generate less than 900 metric tons of GHGs.

Furthermore, projects that generate less than 900 metric tons of GHG, will also participate in emission reductions because air emissions including GHGs are under the purview of CARB (or other regulatory agencies) and will be "regulated" either by CARB, the Federal Government, or other entities. For example, new vehicles will be subject to increased fuel economy standards and emission reductions⁴, large and small appliances will be subject to more strict emissions standards, and energy delivered to consumers will increasingly come from renewable sources⁵. As a result, even the emissions that result from projects that produce less than 900 metric tons of GHG will be subject to emission reductions. Likewise, the project would also participate in the mandated emissions reductions through energy and resource use that is subject to emission reduction mandates beyond "business-as-usual."

Therefore, it is determined that the project would result in less than cumulatively considerable impacts associated with GHG emissions and no mitigation is required.

b)	Conflict with an applicable plan, policy reducing the emissions of greenhouse of	
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated	Less than Significant Impact No Impact

Less Than Significant Impact: In 2006, the State passed the Global Warming Solutions Act of 2006, commonly referred to as AB 32, which set the greenhouse gas emissions reduction goal for the State of California into law. The law requires that by 2020, State emissions must be reduced to 1990 levels by reducing greenhouse gas emissions from significant sources via regulation, market mechanisms, and other actions.

³ 900 metric tons of GHG emissions are estimated to be generated by 50 Single Family Residential units, 70 apartments/condos, 35,000 sf of general commercial/office, 11,000 sf of retail, or 6,300 sf of supermarket/grocery space.

⁴ On September 15, 2009, the United States Environmental Protection Agency (EPA) and the Department of Transportation's National Highway Safety Administration (NHTSA) proposed a national program to reduce GHG emissions and improve fuel economy for new cars and trucks sold in the United States. The proposed standards would cut CO₂ emissions by an estimated 950 million metric tons and 1.8 billion barrels of oil over the lifetime of the vehicles sold under the program.

⁵ California's Renewable Portfolio Standard (RPS) requires electric corporations to increase procurement from eligible renewable energy resources by at least 1% of their retail sales annually, until they reach 20% by 2010. In 2008, the governor signed Executive Order S-14-08 (EO) to streamline California's renewable energy project approval process and increase the state's Renewable Energy Standard to 33% renewable power by 2020. The Air Resources Board is in the process of developing regulations to implement the 33% standard known as the California Renewable Electricity Standard (RES).

Senate Bill 375 (SB 375), passed in 2008, links transportation and land use planning with global warming. It requires the California Air Resources Board (ARB) to set regional targets for the purpose of reducing greenhouse gas emissions from passenger vehicles. Under this law, if regions develop integrated land use, housing and transportation plans that meet SB 375 targets, new projects in these regions can be relieved of certain review requirements under CEQA. Development of regional targets is underway and SANDAG is in the process of preparing the region's Sustainable Communities Strategy (SCS) which will be a new element of the 2050 Regional Transportation Plan (RTP). The strategy will identify how regional greenhouse gas reduction targets, as established by the ARB, will be achieved through development patterns, transportation infrastructure investments, and/or transportation measures or policies that are determined to be feasible.

To implement State mandates to address climate change in local land use planning, local land use jurisdictions are generally preparing GHG emission inventories and reduction plans and incorporating climate change policies into local General Plans to ensure development is guided by a land use plan that reduces GHG emissions. The County of San Diego is currently in the process of updating its General Plan and incorporating associated climate change policies. These policies will provide direction for individual development projects to reduce GHG emissions and help the County meet its GHG emission reduction targets.

Until local plans are developed to address greenhouse gas emissions, such as a local Sustainable Communities Strategy and updated General Plan Policies, the project is evaluated to determine whether it would impede the implementation of AB 32 GHG reduction targets. For the reasons discussed in the response to question VII.a), the project would not impede the implementation of AB 32 reduction targets. Therefore, the project would not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

VIII. HAZARDS AND HAZARDOUS MATERIALS -- Would the project:

a)	Create a significant hazard to the publi transport, storage, use, or disposal of h reasonably foreseeable upset and acc hazardous materials into the environme	nazaro ident	dous materials or wastes or through
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

No Impact: The project will not create a significant hazard to the public or the environment because it does not propose the storage, use, transport, emission, or disposal of Hazardous Substances, nor are Hazardous Substances proposed or currently in use in the immediate vicinity. In addition, the project does not propose to demolish any existing structures onsite and therefore would not create a hazard related

area?

Potentially Significant Impact

to the release of asbestos, lead based paint or other hazardous materials from demolition activities.

f) Impair implementation of or physically interfere with an adopted response plan or emergency evacuation plan?	emergency
☐ Potentially Significant Impact ☐ Less than Significant Impact ☐ No Impact ☐ No Impact	mpact

The following sections summarize the project's consistency with applicable emergency response plans or emergency evacuation plans.

i. OPERATIONAL AREA EMERGENCY PLAN AND MULTI-JURISDICTIONAL HAZARD MITIGATION PLAN:

Less Than Significant Impact: The Operational Area Emergency Plan is a comprehensive emergency plan that defines responsibilities, establishes an emergency organization, defines lines of communications, and is designed to be part of the statewide Standardized Emergency Management System. The Operational Area Emergency Plan provides guidance for emergency planning and requires subsequent plans to be established by each jurisdiction that has responsibilities in a disaster situation. The Multi-Jurisdictional Hazard Mitigation Plan includes an overview of the risk assessment process, identifies hazards present in the jurisdiction, hazard profiles, and vulnerability assessments. The plan also identifies goals, objectives and actions for each jurisdiction in the County of San Diego, including all cities and the County unincorporated areas. The project will not interfere with this plan because it will not

prohibit subsequent plans from being established or prevent the goals and objectives of existing plans from being carried out.

ii. SAN DIEGO COUNTY NUCLEAR POWER STATION EMERGENCY RESPONSE PLAN

No Impact: The San Diego County Nuclear Power Station Emergency Response Plan will not be interfered with by the project due to the location of the project, plant and the specific requirements of the plan. The emergency plan for the San Onofre Nuclear Generating Station includes an emergency planning zone within a 10-mile radius. All land area within 10 miles of the plant is not within the jurisdiction of the unincorporated County and as such a project in the unincorporated area is not expected to interfere with any response or evacuation.

iii. OIL SPILL CONTINGENCY ELEMENT

No Impact: The Oil Spill Contingency Element will not be interfered with because the project is not located along the coastal zone or coastline.

iv. EMERGENCY WATER CONTINGENCIES ANNEX AND ENERGY SHORTAGE RESPONSE PLAN

No Impact: The Emergency Water Contingencies Annex and Energy Shortage Response Plan will not be interfered with because the project does not propose altering major water or energy supply infrastructure, such as the California Aqueduct.

v. DAM EVACUATION PLAN

No Impact: The Dam Evacuation Plan will not be interfered with because the project is not located within a dam inundation zone.

g)	Expose people or structures to a significant wildland fires, including where wildlar where residences are intermixed with w	nds ar	e adjacent to urbanized areas or
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant Impact: The proposed project is adjacent to wildlands that have the potential to support wildland fires. However, the project will not expose people or structures to a significant risk of loss, injury or death involving wildland fires because the project will comply with the regulations relating to emergency access, water supply, and defensible space specified in the Consolidated Fire Code for the 16 Fire Protection Districts in San Diego County. Implementation of these fire safety standards will occur during the condition satisfaction and building permit process. Also, a Fire Service Availability Letter has been received from the Valley Center Fire Protection District. The

Fire Service Availability Letter indicates the expected emergency travel time to the project site to be 4 minutes. The Maximum Travel Time allowed pursuant to the County Public Facilities Element is 10 minutes. Therefore, based on the review of the project by County staff, through compliance with the Consolidated Fire Code and through compliance with the Valley Center Fire Protection District's conditions, the project is not anticipated to expose people or structures to a significant risk of loss, injury or death involving hazardous wildland fires. Moreover, the project will not contribute to a cumulatively considerable impact, because all past, present and future projects in the surrounding area are required to comply with the Consolidated Fire Code.

h)	Propose a use, or place residents foreseeable use that would substantial exposure to vectors, including mosqui transmitting significant public health dise	ally ind toes,	crease current or future resident's rats or flies, which are capable of

<mark>IX. Н</mark> а)	YDROLOGY AND WATER QUALITY Violate any waste discharge requiremen		the project:
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant Impact: The applicant proposes an unmanned photovoltaic solar farm. The project applicant has provided a copy of a Stormwater Management Plan which demonstrates that the project will comply with all requirements of the Watershed Protection Ordinance and the RWQCB. The project site proposes and will be required to implement the following site design measures and/or source control BMPs and/or treatment control BMPs to reduce potential pollutants to the maximum extent practicable from entering storm water runoff: silt fences, fiber rolls and an infiltration trench. These measures will enable the project to meet waste discharge requirements as required by the Land-Use Planning for New Development and Redevelopment Component of the San Diego Municipal Permit (SDRWQCB Order No. R9-2007-0001), as implemented by the San Diego County Jurisdictional Urban Runoff

Management Program (JURMP) and Standard Urban Storm Water Mitigation Plan (SUSMP).

Finally, the project's conformance to the waste discharge requirements listed above ensures the project will not create cumulatively considerable water quality impacts related to waste discharge because, through the permit, the project will conform to Countywide watershed standards in the JURMP and SUSMP, derived from State regulation to address human health and water quality concerns. Therefore, the project will not contribute to a cumulatively considerable impact to water quality from waste discharges.

b) Is the project tributary to an already impaired water body, as listed on the Water Act Section 303(d) list? If so, could the project result in an increase pollutant for which the water body is already impaired?			
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant Impact: The project lies in the Rincon (903.16) hydrologic subarea, within the San Luis Rey hydrologic unit. According to the Clean Water Act Section 303(d) list, June 2007, although the mouth of the San Luis Rey impaired for coliform bacteria, no portion of the San Luis Rey River, which is tributary to the Pacific Ocean, is impaired. Constituents of concern in the San Luis Rey River watershed include coliform bacteria, nitrate, sediment, and pesticides.

The applicant proposes the following activities that are associated with these pollutants: construction and operation of a photovoltaic solar farm. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed such that potential pollutants will be reduced in any runoff to the maximum extent practicable so as not to increase the level of these pollutants in receiving waters: fiber rolls, silt fences and an infiltration trench.

The proposed BMPs are consistent with regional surface water and storm water planning and permitting process that has been established to improve the overall water quality in County watersheds. As a result the project will not contribute to a cumulative impact to an already impaired water body, as listed on the Clean Water Act Section 303(d). Regional surface water and storm water permitting regulation for County of San Diego, Incorporated Cities of San Diego County, and San Diego Unified Port District includes the following: Order 2001-01 (NPDES No. CAS 0108758), adopted by the San Diego Region RWQCB on February 21, 2001; County Watershed Protection, Storm Water Management, and Discharge Control Ordinance (WPO) (Ord. No. 9424); County Storm water Standards Manual adopted on February 20, 2002, and amended January 10, 2003 (Ordinance No. 9426). The stated purposes of these ordinances are to protect the health, safety and general welfare of the County of San Diego residents; to protect water resources and to improve water quality; to cause the use of management practices by the County and its citizens that will reduce the adverse effects of polluted

runoff discharges on waters of the state; to secure benefits from the use of storm water as a resource; and to ensure the County is compliant with applicable state and federal laws. Ordinance No. 9424 (WPO) has discharge prohibitions, and requirements that vary depending on type of land use activity and location in the County. Ordinance No. 9426 is Appendix A of Ordinance No. 9424 (WPO) and sets out in more detail, by project category, what Dischargers must do to comply with the Ordinance and to receive permits for projects and activities that are subject to the Ordinance. Collectively, these regulations establish standards for projects to follow which intend to improve water quality from headwaters to the deltas of each watershed in the County. Each project subject to WPO is required to prepare a Storm Water Management Plan that details a project's pollutant discharge contribution to a given watershed and propose BMPs or design measures to mitigate any impacts that may occur in the watershed.

 □ Potentially Significant Impact □ Less Than Significant With Mitigation Incorporated □ No Impact 	C)	surface or groundwater receiving was beneficial uses?	• •
		Less Than Significant With Mitigation	

Less Than Significant Impact: The Regional Water Quality Control Board has designated water quality objectives for waters of the San Diego Region as outlined in Chapter 3 of the Water Quality Control Plan (Plan). The water quality objectives are necessary to protect the existing and potential beneficial uses of each hydrologic unit as described in Chapter 2 of the Plan.

The project lies in the Rincon (903.16) hydrologic subarea, within the San Luis Rey hydrologic unit that has the following existing and potential beneficial uses for inland surface waters, coastal waters, reservoirs and lakes, and ground water: municipal and domestic supply; agricultural supply; industrial process supply; industrial service supply; freshwater replenishment; hydropower generation; contact water recreation; noncontact water recreation; warm freshwater habitat; cold freshwater habitat; wildlife habitat; marine habitat; migration of aquatic organisms; and, rare, threatened, or endangered species habitat.

The project proposes the following potential sources of polluted runoff: construction and operation of a photovoltaic solar farm. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed to reduce potential pollutants in runoff to the maximum extent practicable, such that the proposed project will not cause or contribute to an exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses: fiber rolls, silt fences and an infiltration trench..

In addition, the proposed BMPs are consistent with regional surface water, storm water and groundwater planning and permitting process that has been established to improve the overall water quality in County watersheds. As a result, the project will not contribute to a cumulatively considerable exceedance of applicable surface or groundwater receiving water quality objectives or degradation of beneficial uses. Refer to Section VIII., Hydrology and Water Quality, Question b, for more information on regional surface water and storm water planning and permitting process.

gro a ex	ubstantially deplete groundwater so oundwater recharge such that there we lowering of the local groundwater tab cisting nearby wells would drop to a legues ses or planned uses for which permits l	ould k le leve vel wh	be a net deficit in aquifer volume or el (e.g., the production rate of pre- nich would not support existing land

_ L	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant Impact: The applicant proposes a photovoltaic solar farm. As outlined in the Storm Water Management Plan (SWMP) dated October 20, 2011 and prepared by RBF Consulting, the project will implement the following site design measures, source control, and/or treatment control BMPs to reduce potential pollutants, including sediment from erosion or siltation, to the maximum extent practicable from entering storm water runoff: A non-toxic, biodegradable, permeable soil-binding agent or permeable rock material to all disturbed or exposed surface areas shall be used. The previously mentioned measures will control erosion and sedimentation and satisfy waste discharge requirements as required by the Land-Use Planning for New Development and Redevelopment Component of the San Diego Municipal Permit (SDRWQCB Order No. R9-2007-0001 and R9-2010-0066), as implemented by the San Diego County Jurisdictional Urban Runoff Management Program (JURMP), Standard Urban Storm Water Mitigation Plan (SUSMP). The SWMP specify and describe the implementation process of all BMPs that will address equipment operation and materials management, prevent the erosion process from occurring, and prevent sedimentation in any onsite and downstream drainage swales. The Department of Public Works will ensure that the Plan is implemented as proposed. Due to these factors, it has been found that the project will not result in significantly increased erosion or sedimentation potential and will not alter any drainage patterns of the site or area on- or off-site. In addition, because erosion and sedimentation will be controlled within the boundaries of the project, the project will not contribute to a cumulatively considerable impact. For further information on soil erosion refer to VI., Geology and Soils, Question b.

f)	Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?
	 □ Potentially Significant Impact □ Less Than Significant With Mitigation Incorporated □ No Impact
	Less Than Significant Impact: The proposed project will not significantly alter established drainage patterns or significantly increase the amount of runoff for the following reasons, based on a Drainage Study prepared by RBF Consulting on October 2011:
	 Drainage will be conveyed to either natural drainage channels or approved drainage facilities.
	 The project will not increase surface runoff exiting the project site equal to or greater than one cubic foot/second.
	Therefore, the project will not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site. Moreover, the project will not contribute to a cumulatively considerable alteration or a drainage pattern or increase in the rate or amount of runoff, because the project will not substantially increase water surface elevation or runoff exiting the site, as detailed above.
g)	Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems?
	 □ Potentially Significant Impact □ Less Than Significant With Mitigation Incorporated □ No Impact

Less Than Significant Impact: The project does not propose to create or contribute runoff water that would exceed the capacity of existing or planned storm water drainage systems. Based on a Drainage Study prepared by RBF Consulting on October 2011,

the project will not cause flooding downstream, nor will it hydraulically impact downstream storm water infrastructure.

h) Provide substantial additional sources of polluted runoff?

Potentially Significant Impact
Less Than Significant With Mitigation
Incorporated

Less Than Significant Impact: The project proposes the following potential sources of polluted runoff: construction activities. However, the following site design measures

Less Than Significant Impact: The project proposes the following potential sources of polluted runoff: construction activities. However, the following site design measures and/or source control BMPs and/or treatment control BMPs will be employed such that potential pollutants will be reduced in runoff to the maximum extent practicable: silt fences, fiber rolls and an infiltration trench. Refer to IX Hydrology and Water Quality Questions a, b, c, for further information.

i) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map, including County Floodplain Maps?

Potentially Significant Impact	 Less than Significant Impact
Less Than Significant With Mitigation Incorporated	No Impact

Less Than Significant: Drainage swales, which are mapped on a FEMA floodplain map, a County Floodplain Map or have a watershed greater than 25 acres were identified on the project site or off-site improvement locations. However, the project is not proposing to place structures with a potential for human occupation within these areas and will not place access roads or other improvements which will limit access during flood events or affect downstream properties. Also, all proposed solar panels and inverts will be anchored down.

j) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?

Potentially Significant Impact	\boxtimes	Less than Significant Impact
Less Than Significant With Mitigation Incorporated		No Impact

Less Than Significant Impact: The project site contains drainage swales, which are identified as being 100-year flood hazard areas. However, the project is not proposing to place structures, access roads or other improvements which will impede or redirect flood flows in these areas. Also, all proposed solar panels and inverts will be anchored down.

k) Expose people or structures to a significant risk of loss, injury or death involving flooding?

OOL OROHAND- VALLET OLIVIEN - 55	April 3, 2012
Potentially Significant Impact Less Than Significant With Mitigation Incorporated	☐ Less than Significant Impact☑ No Impact
No Impact: The project site lies outside Therefore, the project will not expose people involving flooding.	·
 Expose people or structures to a signif flooding as a result of the failure of a le 	icant risk of loss, injury or death involving vee or dam?
Potentially Significant Impact Less Than Significant With Mitigation Incorporated	☐ Less than Significant Impact☒ No Impact
No Impact: The project site lies outside a dam/reservoir within San Diego County. immediately downstream of a minor dam Therefore, the project will not expose people involving flooding.	In addition, the project is not located that could potentially flood the property.
m) Inundation by seiche, tsunami, or mud	low?
 Potentially Significant Impact Less Than Significant With Mitigation Incorporated SEICHE 	☐ Less than Significant Impact☑ No Impact

No Impact: The project site is not located along the shoreline of a lake or reservoir; therefore, could not be inundated by a seiche.

ii. TSUNAMI

No Impact: The project site is located more than a mile from the coast; therefore, in the event of a tsunami, would not be inundated.

iii. MUDFLOW

No Impact: Mudflow is type of landslide. The site is not located within a landslide susceptibility zone. Also, it has been determined that the geologic environment of the project area has a low probability to be located within an area of potential or pre-existing conditions that could become unstable in the event of seismic activity. In addition, though the project does propose land disturbance that will expose unprotected soils, the project is not located downstream from unprotected, exposed soils within a landslide susceptibility zone. Therefore, it is not anticipated that the project will expose people or property to inundation due to a mudflow.

X. LAND USE AND PLANNING Would the project:
a) Physically divide an established community?
 □ Potentially Significant Impact □ Less than Significant Impact □ Less Than Significant With Mitigation Incorporated □ No Impact
No Impact: The project does not propose the introduction of new infrastructure such major roadways or water supply systems to the area. All proposed utilities would be located underground, including a private utility line from the southern end of the site under Valley Center Road to the existing utility poles located along the south side of the road. Therefore, the proposed project will not significantly disrupt or divide the established community.
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?
 □ Potentially Significant Impact □ Less Than Significant With Mitigation Incorporated □ No Impact
Less Than Significant Impact: The proposed project is subject to the General Plan Land Use Designation (SR-4) Semi-Rural Residential. The project is consistent with the General Plan because Major Impact Services and Utilities are anticipated by the SR-4 Land Use Designation upon issuance of a Major Use Permit. The project is subject to the policies of the Valley Center Community Plan. The proposed project is consistent with the policies of the Valley Center Community Plan. The property is zoned A70, Limited Agricultural which permits solar farms the Major Impact Utilities and Services Use Type pursuant to the Zoning Ordinance Section 2705b; therefore, the proposed project is consistent with plan and zone.
 XI. MINERAL RESOURCES Would the project: a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?
 ☐ Potentially Significant Impact ☐ Less Than Significant With Mitigation Incorporated ☐ No Impact

Less Than Significant Impact: The lands within the project site have not been classified by the California Department of Conservation – Division of Mines and Geology (Update of Mineral Land Classification: Aggregate Materials in the Western San Diego Production-Consumption Region, 1997); but the site is underlain by alluvial deposits.

However, the project site is surrounded by densely developed land uses including residential and agricultural land uses which are incompatible to future extraction of mineral resources on the project site. A future mining operation at the project site would likely create a significant impact to neighboring properties for issues such as noise, air quality, traffic, and possibly other impacts. Therefore, implementation of the project will not result in the loss of availability of a known mineral resource that would be of value since the mineral resource has already been lost due to incompatible land uses.

b)	Result in the loss of availability of a loc site delineated on a local general plan, s		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact
consic Land l	npact: The project site is zoned A dered to be an Extractive Use Zone (S-8 Use Designation (24) with an Extractive I ent, 2000).	32) no	r does it have an Impact Sensitive
XII. N a)	OISE Would the project result in: Exposure of persons to or generation established in the local general plan or of other agencies?		
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Less Than Significant Impact: The project is comprised of the development and operations of a photovoltaic (PV) solar farm to be located on privately-held lands near Valley Center. Based on a the Noise Analysis prepared by Ldn Consulting dated November 11, 2011, the project would not expose people to potentially significant noise levels that exceed the allowable limits of the County of San Diego General Plan, County of San Diego Noise Ordinance, and other applicable standards for the following reasons:

General Plan – Noise Element

The County of San Diego General Plan, Noise Element addresses noise sensitive areas and requires an acoustical study to be prepared for any use that may expose noise sensitive area to noise in excess of a Community Noise Equivalent Level (CNEL) of 60

decibels (dBA). Moreover, if the project is excess of CNEL 60 dB(A), modifications must be made to project to reduce noise levels. Noise sensitive areas include residences, hospitals, schools, libraries or similar facilities where quiet is an important attribute. Based on a Noise Analysis prepared by Ldn Consulting dated November 11, 2011 and project review by County Noise Specialist Emmet Aguino on November 14, 2011, project implementation will not expose existing or planned noise sensitive areas to road, airport, heliport, railroad, industrial or other noise in excess of the CNEL 60 dB(A). Additionally, the project does not propose any noise sensitive land uses. Therefore, the project will not expose people to potentially significant noise levels that exceed the allowable limits of the County of San Diego General Plan, Noise Element.

Noise Ordinance - Section 36.404

Based on a Noise Analysis prepared by Ldn Consulting dated November 11, 2011, nontransportation noise generated by the project is not expected to exceed the standards of the County of San Diego Noise Ordinance (Section 36.404) at or beyond the project's property line. The site is zoned A70 that has a one-hour average sound limit of 45 dBA.

The project is comprised of the development and operation of a photovoltaic (PV) solar farm to be located on privately-held lands near Valley Center. Permanent noise generating sources include structures that consists of inverters and transformers. Combined noise from the transformer and inverter operations would generate a sound level of 41.6 dBA at the nearest property line, approximately 190 feet away, and would comply with the 45 dBA sound level requirement. The Noise Analysis state's the project's noise levels at the adjoining properties would not exceed County Noise Standards.

Noise Ordinance – Section 36.409

Based on a Noise Analysis prepared by Ldn Consulting dated November 11, 2011, the project will not generate construction noise that may exceed the standards of the County of San Diego Noise Ordinance (Section 36.409). Construction operations will occur only during permitted hours of operation pursuant to Section 36.409. Also, it is not anticipated that the project will operate construction equipment in excess of an average sound level of 75dB between the hours of 7 AM and 7 PM. Temporary construction equipment would be comprised of three dozers, five graders and four loaders/backhoes and water trucks. Most of the construction activities would consist of clearing and grubbing to prepare the site. Due to the give spatial separation of the equipment, temporary construction equipment operations would comply with the 75 dBA (8hr Leg) requirement at the project property lines.

Noise Ordinance – Section 36.410

Based on a Noise Analysis prepared by Ldn Consulting dated November 11, 2011, the project would not generate impulsive noise that may exceed the standards of the County of San Diego Noise Ordinance (Section 36.410).

The County Impulsive Noise requirements would allow a maximum sound level of 82 dBA for 25 percent of the measurement period. The proposed pile driver operations were evaluated and it was determined that pile driver operations would be below the 82 dBA threshold. Therefore, the project as currently designed, would comply with County Impulsive Noise requirements.

Finally, the project's conformance to the County of San Diego General Plan (Noise Element) and County of San Diego Noise Ordinance (Section 36.404 and 36.409) ensures the project will not create cumulatively considerable noise impacts, because the project will not exceed the local noise standards for noise sensitive areas; and the project will not exceed the applicable noise level limits at the property line or construction noise limits, derived from State regulation to address human health and quality of life concerns. Therefore, the project will not contribute to a cumulatively considerable exposure of persons or generation of noise levels in excess of standards established in the local general plan, noise ordinance, and applicable standards of other agencies.

b)	Exposure of persons to or generation groundborne noise levels?	of	excessive	groundborne	vibration	or
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less tha	an Significant I act	mpact	

No Impact: The project does not propose any of the following land uses that can be impacted by groundborne vibration or groundborne noise levels.

- 1. Buildings where low ambient vibration is essential for interior operation, including research and manufacturing facilities with special vibration constraints.
- 2. Residences and buildings where people normally sleep including hotels, hospitals, residences and where low ambient vibration is preferred.
- 3. Civic and institutional land uses including schools, churches, libraries, other institutions, and quiet office where low ambient vibration is preferred.
- 4. Concert halls for symphonies or other special use facilities where low ambient vibration is preferred.

Also, the project does not propose any major, new or expanded infrastructure such as mass transit, highways or major roadways or intensive extractive industry that could generate excessive groundborne vibration or groundborne noise levels on-site or in the surrounding area.

c)	A substantial permanent increase in a above levels existing without the project		noise levels in the project vicinity
	i otornany organicant impact	\boxtimes	Less than Significant Impact
	Less Than Significant With Mitigation Incorporated		No Impact

Less Than Significant Impact: The project involves the following permanent noise sources that may increase the ambient noise level: Vehicular traffic on nearby roadways

and inverter and transformers facilities. As indicated in the response listed under Section XI Noise, Question a., the project would not expose existing or planned noise sensitive areas in the vicinity to a substantial permanent increase in noise levels that exceed the allowable limits of the County of San Diego General Plan, County of San Diego Noise Ordinance, and other applicable local, State, and Federal noise control. Also, the project is not expected to expose existing or planned noise sensitive areas to direct noise over existing ambient noise levels based on review of the project by County Noise Specialist Emmet Aquino on November 14, 2011 and a Noise Analysis prepared by Ldn Consulting dated November 11, 2011.

The project will not result in cumulative noise impacts because a list of past, present and future projects within in the vicinity were evaluated. It was determined that the project in combination with a list of past, present and future project would not expose existing or planned noise sensitive areas to cumulative noise over existing ambient noise levels. Refer to XVII. Mandatory Findings of Significance for a comprehensive list of the projects considered.

d)	A substantial temporary or periodic increvicinity above levels existing without the	
	Potentially Significant Impact	Less than Significant Impact
	Less Than Significant With Mitigation Incorporated	No Impact

Less Than Significant Impact: The project does not involve any uses that may create substantial temporary or periodic increases in ambient noise levels in the project vicinity including but not limited to extractive industry; outdoor commercial or industrial uses that involve crushing, cutting, drilling, grinding, or blasting of raw materials; truck depots, transfer stations or delivery areas; or outdoor sound systems.

Also, general construction noise is not expected to exceed the construction noise limits of the County of San Diego Noise Ordinance (Section 36.409), which are derived from State regulations to address human health and quality of life concerns. Construction operations will occur only during permitted hours of operation pursuant to Section 36.409. Also, it is not anticipated that the project will operate construction equipment in excess of 75 dB for more than an 8 hours during a 24-hour period. Therefore, the project would not result in a substantial temporary or periodic increase in existing ambient noise levels in the project vicinity. Temporary construction equipment would be comprised of three dozers, five graders and four loaders/backhoes and water trucks. Most of the construction activities would consist of clearing and grubbing to prepare the Due to the give spatial separation of the equipment, temporary construction equipment operations would comply with the 75 dBA (8hr Leg) requirement at the project property lines pursuant to Section 36.409. The County Impulsive Noise requirements would allow a maximum sound level of 82 dBA for 25 percent of the measurement period. The proposed pile driver operations were also evaluated and it was determined that pile driver operations would be below the 82 dBA threshold. Therefore, the project as currently designed, would comply with County noise

standards.

e)	For a project located within an airport land not been adopted, within two miles of a pul the project expose people residing or wor noise levels?	olic airport or public use airport, would

i. ii. iii. iv. v.	Fire protection? Police protection? Schools? Parks? Other public facilities?		
☐ Pot	entially Significant Impact		

No Impact: Based on the service availability forms received for the project, the proposed project will not result in the need for significantly altered services or facilities. Service availability forms have been provided which indicate existing services are available to the project from the following agencies/districts: Valley Center Fire Protection District. The project does not involve the construction of new or physically altered governmental facilities including but not limited to fire protection facilities, sheriff facilities, schools, or parks in order to maintain acceptable service ratios, response times or other performance service ratios or objectives for any public services. Therefore, the project will not have an adverse physical effect on the environment because the project does not require new or significantly altered services or facilities to be constructed.

XV. RI	<u>ECREATION</u>

a) (RANSPORTATION AND TRAFFIC Was Conflict with an applicable plan, ordinant effectiveness for the performance of the all modes of transportation including material relevant components of the circulation intersections, streets, highways and free mass transit?	ce or e circu ass tra n sys	policy establishing measures of the ulation system, taking into account ansit and non-motorized travel and tem, including but not limited to
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

The County of San Diego Guidelines for Determining Significance for Traffic and Transportation (Guidelines) establish measures of effectiveness for the performance of the circulation system. These Guidelines incorporate standards from the County of San Diego Public Road Standards and Mobility Element, the County of San Diego Transportation Impact Fee Program and the Congestion Management Program.

Less Than Significant With Mitigation Incorporated: The proposed project will result in an approximately one ADT. However, the project will not have a direct impact related to a conflict with any performance measures establishing measures of effectiveness of the circulation system because the project trips do not exceed any of the County's Guidelines for Determining Significance for direct impacts related to Traffic and Transportation. As identified in the County's Guidelines for Determining Significance for Traffic and Transportation, the project trips would not result in a substantial increase in the number of vehicle trips, volume of capacity ratio on roads, or congestion at intersections in relation to existing conditions. In addition, the project would not conflict with policies related to non-motorized travel such as mass transit, pedestrian or bicycle facilities. Therefore, the project would not have a direct impact related to a conflict with policies establishing measures of the effectiveness for the performance of the circulation system.

The proposed project generates approximately one ADT. These trips will be distributed on Circulation/Mobility Element roadways in the County some of which currently or are projected to operate at inadequate levels of service. The County of San Diego has developed an overall programmatic solution that addresses existing and projected future road deficiencies in the unincorporated portion of San Diego County. The TIF program creates a mechanism to proportionally fund improvements to roadways necessary to mitigate potential cumulative impacts caused by traffic from future development. These new projects were based on SANDAG regional growth and land use forecasts, the SANDAG Regional Transportation Model was utilized to analyze build-out (year 2030) development conditions on Circulation/Mobility Element roadway network throughout the unincorporated area of the County. Based on the results of the traffic modeling, funding necessary to construct transportation facilities that will mitigate cumulative impacts from new development was identified. Existing roadway deficiencies will be corrected through improvement projects funded by other public funding sources, such as TransNet, gas tax, and grants. Potential cumulative impacts to the region's freeways have been addressed in SANDAG's Regional Transportation Plan (RTP). This plan, which considers freeway buildout over the next 30 years, will use funds from TransNet, State, and Federal funding to improve freeways to projected level of service objectives in the RTP.

These project trips therefore contribute to a potential significant cumulative impact and mitigation is required. The potential growth represented by this project was included in the growth projections upon which the TIF program is based. By ensuring TIF funds are spend for the specific roadway improvements identified in the TIF Program, the CEQA mitigation requirement is satisfied and the Mitigation Fee nexus is met. Therefore, payment of the TIF, which will be required at issuance of building permits, in combination with other components of the program described above, will mitigate potential cumulative traffic impacts to less than significant.

b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or

Incorporated

highways?					
Potentially Significant ImpactLess Than Significant With MitigationIncorporated		Less than Significant Impact No Impact			

The designated congestion management agency for the San Diego region is SANDAG. SANDAG is responsible for preparing the Regional Transportation Plan (RTP) of which the Congestion Management Program (CMP) is an element to monitor transportation system performance, develop programs to address near- and long-term congestion, and better integrate land use and transportation planning decisions. The CMP includes a requirement for enhanced CEQA review applicable to certain large developments that generate an equivalent of 2,400 or more average daily vehicle trips or 200 or more peak hour vehicle trips. These large projects must complete a traffic analysis that identifies the project's impacts on CMP system roadways, their associated costs, and identify appropriate mitigation. Early project coordination with affected public agencies, the Metropolitan Transit System (MTS) and the North County Transit District (NCTD) is required to ensure that the impacts of new development on CMP transit performance measures are identified.

Less Than Significant Impact: The project proposes an increase of one ADT. The additional one ADTs from the proposed project do not exceed the 2400 trips (or 200 peak hour trips) required for study under the region's Congestion Management Program. Additionally, the project does not involve construction of any new buildings, nor does it propose a new primary use. The additional access or support structures will not generate ADTs on a daily basis. Therefore the project will not conflict with travel demand measures or other standards of the congestion management agency.

	0	easures or other standards of the co		ion management agency.

No Impact

Less Than Significant Impact: The proposed project will not significantly alter roadway geometry on Vesper Road. A safe and adequate sight distance for the prevailing operating speed of traffic on Vesper Road from the project access driveway, per the Design Standards of Section 6.1.F of the County of San Diego Public Road Standards shall be required to the satisfaction of the Director of the Department of Public Works. All road improvements will be constructed according to the County of San Diego Public and Private Road Standards. The proposed project will not place incompatible uses (e.g., farm equipment) on existing roadways. Therefore, the proposed project will not significantly increase hazards due to design features or

Less Than Significant Impact:

The project would require water service from a commercial water truck vendor to wash the panels. Water supplies for construction and application of the binding agent would be provided by the existing wells located on-site. Adequate water resources and entitlements are available to serve the requested water resources. Therefore, the project will have sufficient water supplies available to serve the project.

	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

Per the instructions for evaluating environmental impacts in this Initial Study, the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory were considered in the response to each question in sections IV and V of this form. In addition to project specific impacts, this evaluation considered the projects potential for significant cumulative effects. Resources that have been evaluated as significant would be potentially impacted by the project, particularly Biology. However, mitigation has been included that clearly reduces these effects to a level below significance. This mitigation includes biological monitor during all land disturbing activities to ensure that there are no adverse impacts to the oak root zones. As a result of this evaluation, there is no substantial evidence that, after mitigation, significant effects associated with this project would result. Therefore, this project has been determined not to meet this Mandatory Finding of Significance.

D)	considerable? ("Cumulatively considera a project are considerable when viewed projects, the effects of other current projects)?	ble" med in o	neans that the incremental effects of connection with the effects of pas
	Potentially Significant Impact Less Than Significant With Mitigation Incorporated		Less than Significant Impact No Impact

The following list of past, present and future projects were considered and evaluated as a part of this Initial Study:

PROJECT NAME	PERMIT/MAP NUMBER
Via Salvador Tentative Parcel Map	TPM 21086
Kastner Tentative Parcel Map	TPM 20661
Vesper Groves Tentative Map	TM 5232
Jarvis/Early Tentative Parcel Map	TPM 20462
Gilbert Tentative Parcel Map	TPM 20438
Silverwood Ranch Tentative Map	TM 4791
Cricket Communication Minor Use Permit	ZAP 09-001
Garcia Tentative Map	TM 5458

Per the instructions for evaluating environmental impacts in this Initial Study, the potential for adverse cumulative effects were considered in the response to each question in sections I through XVIII of this form. In addition to project specific impacts, this evaluation considered the projects potential for incremental effects that are cumulatively considerable. As a result of this evaluation, there were determined to be potentially significant cumulative effects related to air quality, transportation, geology, biology and agriculture. However, mitigation has been included that clearly reduces

these cumulative effects to a level below significance. This mitigation includes dust suppression measures during construction, payment of the TIF, preparation of a Geotechnical Analysis prior to building permit issuance, monitoring of all construction activities within the 50-foot oak root zone and mitigation for agricultural resources. As a result of this evaluation, there is no substantial evidence that, after mitigation, there are cumulative effects associated with this project. Therefore, this project has been determined not to meet this Mandatory Finding of Significance.

c)					environme beings, ei				cause	substanti	al
	Potentially Significant ImpactLess Than Significant With Mitigation Incorporated					on 🗌	ss than Impact	_	ficant Ir	mpact	

In the evaluation of environmental impacts in this Initial Study, the potential for adverse direct or indirect impacts to human beings were considered in the response to certain questions in sections I. Aesthetics, III. Air Quality, VI. Geology and Soils, VIII. Hazards and Hazardous Materials, IX Hydrology and Water Quality XII. Noise, XIII. Population and Housing, and XVI. Transportation and Traffic. As a result of this evaluation, there were determined to be potentially significant effects to human beings related to the following air quality, geology and soils and transportation and traffic. However, mitigation has been included that clearly reduces these effects to a level below significance. This mitigation includes dust suppression measures during construction, preparation of a Geotechnical Analysis prior to issuance of a building permit and payment of the TIF. As a result of this evaluation, there is no substantial evidence that, after mitigation, there are adverse effects to human beings associated with this project. Therefore, this project has been determined not to meet this Mandatory Finding of Significance.
